

SLATE Application Reviewer Obligations

Version	Comment	Effective date
1.0	Initial version	September 25, 2020
2.0	Updated review procedures	March 23, 2021

In order to safely operate the SLATE Platform, the SLATE Platform Administrators require that SLATE Application Reviewers agree to the following:

- Application Reviewers must follow the [SLATE Application Development and Review Procedures](#) document, which outlines specific application criteria for reviewing any application that is to be a part of the SLATE application catalog.

The SLATE Platform Administrators may deny applications or remove them from the catalog out of urgent concern for the security or interoperability of the overall platform.

To support Application Reviewers' observance of these obligations, SLATE Platform Administrators will:

- Offer consultation, answer questions, and work to resolve any ambiguities with the overall process as described in the SLATE Application Development and Review Procedures document.
- Provide information about [Trusted Image Sources](#).
https://docs.google.com/document/d/12DEaqfJV37jde5hAO2TnpGQ_aCPUkyNIG_vmv7CDQhg/edit

For the safety of participating sites in the SLATE federation, Application Reviewers will ensure that applications in the SLATE catalog:

- Do not contain knowingly malicious software.
- Do not contain knowingly vulnerable versions of application software or dependencies.
 - Reviewers will make reasonable efforts to check the version of the application against organizations such as the NIST National Vulnerability Database (NVD).
- Are not configured by default to allow unrestricted network proxying or tunneling.
